center	Alex	

1. The Goal Description.

The purpose of the project is to facilitate social communication between people by writing messages, voice calls or video calls.

2. The Methodology. —

We will use **Iterative model** to apply messaging app software

lterative model gets a preliminary version of system to the user quickly so that business value is provided.

Since user are working with the system important additional requirement may be identified and incorporated into subsequent version

3. Tasks Table with Dependences, Duration

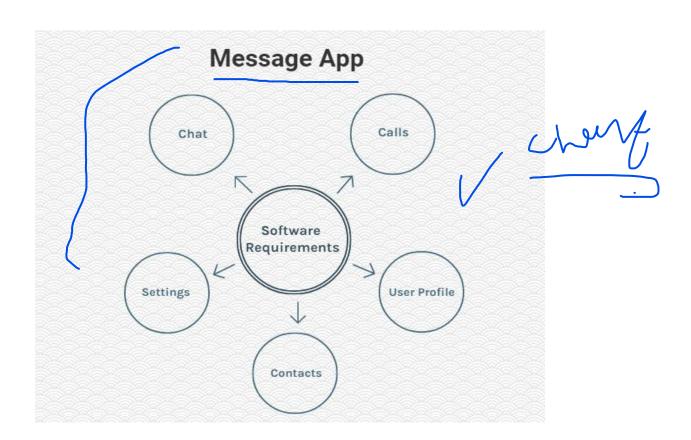

- Goal specification (T1)
 - Feasibility study (T2)
 - Requirement analysis and specification(T3)
 - Requirement documentation (T4)
 - Primary and Initial design (T5)
 - Design Message App Management system interfaces (T6)
 - Design completeness and verification(T7)
 - Implementation & coding (T8)
 - System verification and testing (T9)
 - System Review With Customer(T10)
 - Complete Implementation (T11)
 - System Launch (T12)

Tasks	Dependences	duration
T1		3 Days
T2	T1 (M1)	· 3 Days
Т3	T1, T2 (M3)	1 Week
Т4	Т3	3 Days
Т5	T4(M4)	3 Days
Т6	T5(M5)	1 Week
Т7	T6(M5)	3 Days
Т8	T7, T6,T5(M6,M7)	1 Week
Т9	Т8	3 Days
T10	T9 (M9)	2 Days
T11	T10(M10)	2 Days
T12	T11(M,9,M10)	2 Days

For the Message App system the Milestones and Deliverables are:

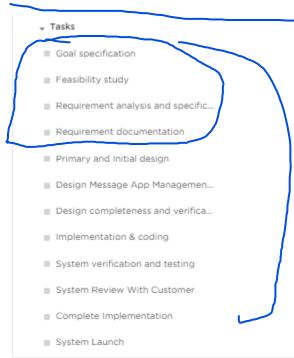

10-Project End (M10)

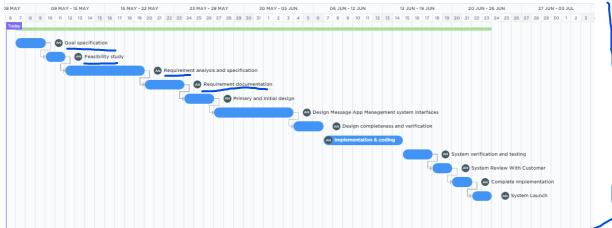

1-Project approval (M1)
2-Project Start (M2)
3-Complete Gathering Requirements (M3)
4-Design approval (M4)
5-Complete Design (M5)
6-Complete Coding (M6)
7-Testing (M7)
8-Complete Testing (M8)
9-Complete Implementation (M9)

4. Project Schedule

https://sharing.clickup.com/g/h/6-9881141-7/c4cd0f5c6e48158

5. The Requirements:

User Requirements

- Login
- Adding contacts
- Sending messages and media to individuals
- Creating groups
- Message Status
- Calling (Voice / video)
- Send Attachments
- Status
- Security
- Privacy
- Logout

System Requirements

- Login:- user can login with number and receive a code for confirmation (user have 3 attempts only).
- Adding New Contacts: The application should detect all contacts from the user's phone book. If any of the contacts have user accounts with Message App, those contacts must automatically be added to the user's contact list on Message App. If any of the contacts have not yet registered on Message App, user should be provided with an invite option that sends those contacts a regular text message asking them to join Message App along with a link to the Message App application on Google Playstore.
- Create Groups: The user can put more than one contact and communicate with them in the same conversation.
- Send Message: User should be able to send instant message to any contact on his/her Message App contact list. User should be notified when message is successfully delivered to the recipient by displaying a tick sign next to the message sent.
- Calling:- The user can communicate with his contacts who use the same application via voice and video call.
- Send Attachments: User should be able to send audio, video and images as attachments. Audio formats that the application should support: mp3 wav Video formats that the application should support: avi mp4 flv gif Image formats that the application should support: jpg png.
- Message Status:- User must be able to get information on whether the message sent has been read by the intended recipient. If recipient reads the message, 2 ticks must appear next to the message read.
- Status:- User Can Add a video or image or Text to story and disappear after 24 hours.
- Privacy :- User can edit his name and change his photoetc
- Security: The system must be completely safe against cyber-attacks and hacking.
- Logout :- The user can log out of the application and log in again with all his data save And can also delete his account with complete data loss.

Domain Requirements

- Login:- user can login with number and receive a code for confirmation.
- **Portability**Application must be able to run an many different systems.
- Security: The system must be completely safe against cyber-attacks and hacking (by using end to end encryption.)
- **Privacy**:- User can edit his name and change his photoetc and no one can see it unless it is the user who has given permission to see it .

Functional Requirements

1. User Login -:

User must be able to register for the application through a valid phone number. On installing theapplication, user must be prompted to register their phone number. If user skips this step, application should close. The user's phone number will be the unique identifier of his/her account on Message App.

2. Adding New Contacts

The application should detect all contacts from the user's phone book. If any of the contacts have user accounts with Message App, those contacts must automatically be added to the user's contact list on Message App.

If any of the contacts have not yet registered on Message App, user should be provided with an invite option that sends those contacts a regular text message asking them to join Message App along with a link to the Message App application on Google Play store.

3. Send Message

User should be able to send instant message to any contact on his/her Message App contact list. User should be notified when message is successfully delivered to the recipient by displaying atick sign next to the message sent.

4. Send Attachments

User should be able to send audio, video, and images as attachments. Audio formats that the application should support: mp3 wav.

Video formats that the application should support: avi mp4 flv gif Image formats that the application should support jpg png

5. Broadcast Message

User should be able to create groups of contacts. User should be able to broadcast messages to these groups.

6. Message Status

User must be able to get information on whether the message sent has been read by the intended recipient. If recipient reads the message, 2 ticks must appear next to the messageread.

7. User Profile

The user can edit his name and personal pictureetc.

Non-Functional Requirements

1. Scalability

Message App should be able to provide instant messaging services to 1 billion users at any giventime.

2. Privacy

Messages shared between users should be encrypted to maintain privacy.

3. Robustness

In case user's device crashes, a backup of their chat history must be stored on remote databaseservers to enable recoverability.

4. Performance

Application must be lightweight and must send messages instantly.

5. Portability

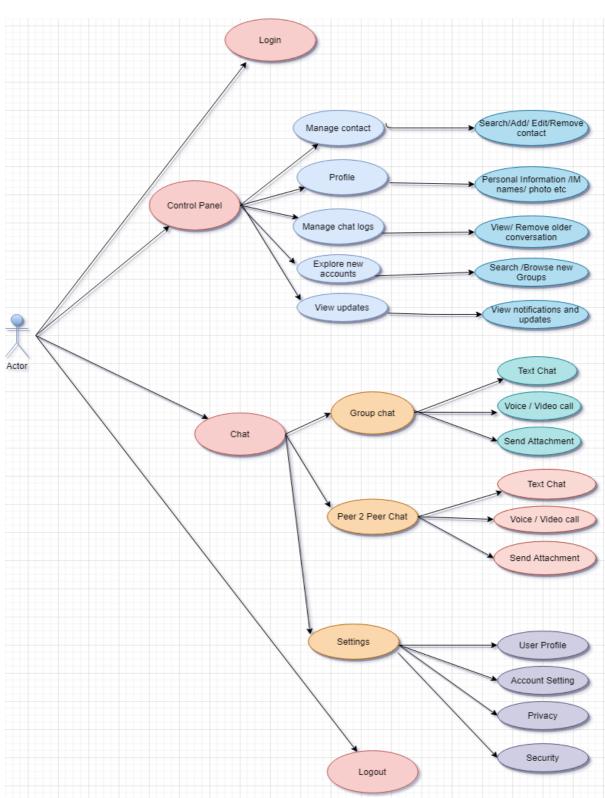

Application must be able to run an many different systems.

2- Use case:

1. Use Case Diagram

 $\label{link:https://drive.google.com/file/d/1P} \ \, 73ZB6mniVx7FlGqNavSPCQpIkAyq-E/view?usp=sharing$

2. Represent the use cases elements in table like the following.

Use Case ID	LO12
Use Case	Login.
Name	
Summary	A user login to System to access the functionality of the system.
Pre-	System must be connected to the network.
Condition	
Trigger	The user puts his phone number and then sends the code in a SMS message, and after confirmation is made, he enters the user interface
Post -	After successfully logging in, the user will be directed to the application
Condition	interface and can use all the features of the app.
Main	1- The user must open the application
Scenario	2-Select his country code
	3-The user puts his phone number
	4- A confirmation message will be sent
	5-The user sets the code sent to him, and after making sure of its validity, the
	user will be directed to the main application interface
	6- And then use the features of the app
Alternatives	1-If the user is not connected to the Internet
	2-User puts an incorrect phone number
	3-The user uses an incorrect code in the confirmation stage instead of the
	code sent to him in a SMS message.

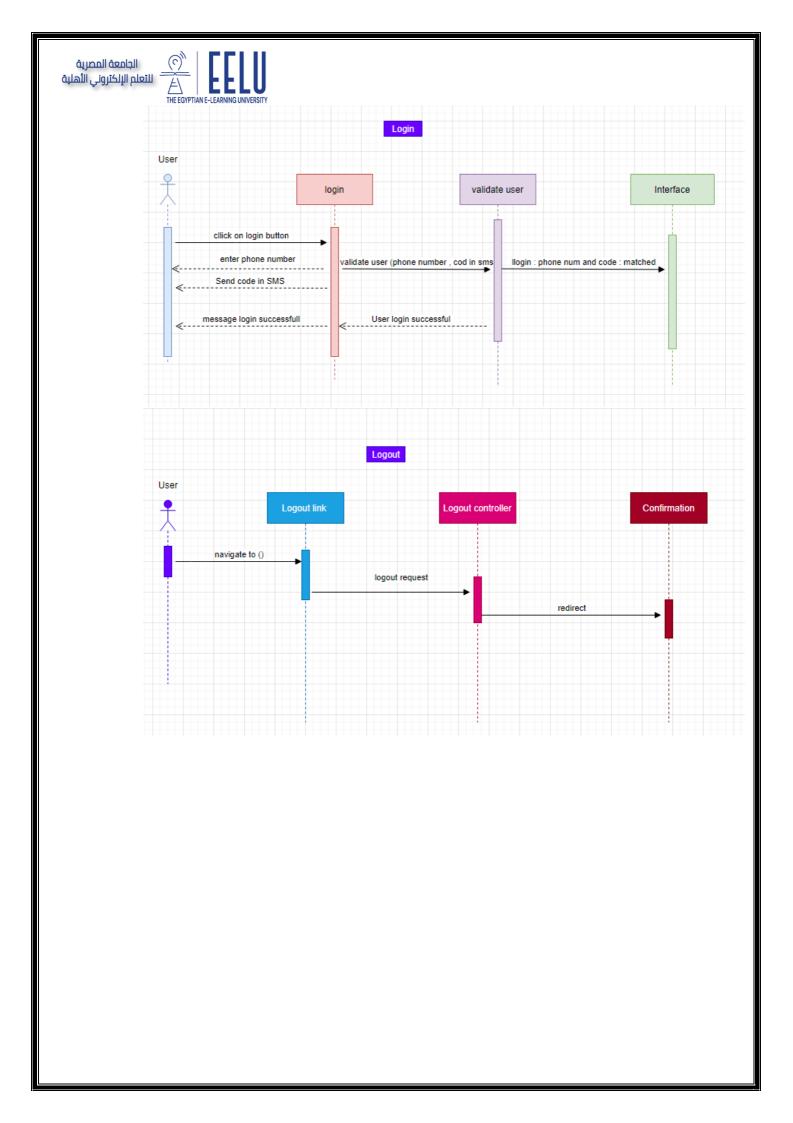

Use Case ID	PY32
Use Case Name	Privacy
Summary	User can edit his name and change his photoetc
Pre- Condition	When you log in for the first time, these settings are the default.
Trigger	The user can change his profile picture, who can chat with and block list, who can add him to groups, etc.
Post - Condition	The user can control what others see about his personal info.
Main	1-The user must open the application
Scenario	2- The user must open Settings then Privacy
	User can Edit somethings Such as :-
	1-Last seen
	2- Profile picture
	3-About
	4-Read Receipts of Messages
	5- who can add him to groups
Alternatives	If the user does not modify this default data, he loses some good application features.

	-
Use Case ID	LT25
Use Case	Logout
Name	
Summary	The user clicks on "Logout" and their session is terminated.
Pre-	The user is logged in.
Condition	The user no longer wants to be logged in.
Trigger	User is done using the mobile application
Post -	The user is logged out
Condition	
Main	1-User is done using the web application
Scenario	2-The user clicks on the logout button
	3-The system logs the user out and invalidates the cookie/session
	4-The system redirects to the default logout page.
Alternatives	The user will be logged in unless he presses the Logout button

6. The Sequence Diagram:

Develop the sequence diagram(s) that represent the interaction between objects in a sequential order.

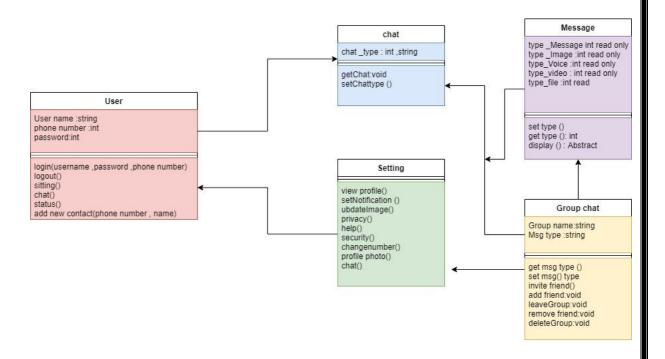

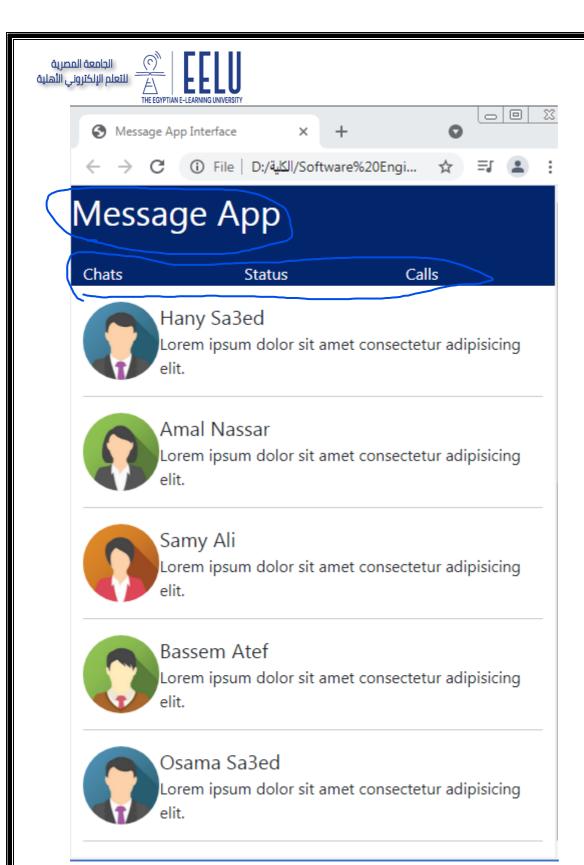

8. UML Diagram:

9. Prototype Development
